

Kjellberg Finsterwalde - Electrodes since 1923

The Kjellberg Finsterwalde Elektroden und Zusatzwerkstoffe GmbH is one of Europe's oldest electrode manufacturers. The company with many years of tradition was founded in 1922 as Kjellberg Elektro-Maschinen GmbH and named after Oscar Kjellberg, the inventor of the coated rod electrode. His intention was to produce welding generators which are suitable for Kjellberg welding electrodes. Already one year later, the production of welding electrodes started in Finsterwalde. Today, the Kjellberg Finsterwalde Elektroden und Zusatzwerkstoffe GmbH has its production site in Massen in one of Europe's latest electrode factories.
