

Kjellberg Quality Management

Kjellberg Finsterwalde Electrode Test Laboratory

The term quality means much more to us than just first-class quality welding electrodes. We attach great importance to the complete quality management, from the product development and manufacture to the customer, therefore we are certified according to **EN ISO 9001**. We do not consider quality as perfectionism or an end in itself, but it should always be aimed at our customers' expectations.

With the help of the Kjellberg quality management our motivated employees are committed to satisfy our customers' high demands. In order to keep these high standards we have built up a quality management system which is certified by Det Norske Veritas, one of the biggest international classification societies.

The quality management starts with our raw-material suppliers, includes inspections during the manufacture and also the release of the finished products. We have determined tolerance limits for the raw materials we use and we demand the compliance of these limits from our suppliers by contract. All incoming goods are thoroughly checked and the results are recorded.

Likewise, the production processes and connected quality inspections are subject to strict controls. Almost all our rod electrodes have been approved by national or international supervising organisations and are therefore subject to regular examinations.

The following approval and release organisations certify Kjellberg quality products:

- **American Bureau of Shipping**
- **Bureau Veritas**
- **Germanischer Lloyd**
- **Lloyd's Register of Shipping**
- **Det Norske Veritas**
- **Polski Rejestr Statkow**
- **Russian Maritime Register of Shipping**
- **Deutsche Bahn**
- **TUEV**
- **CE**
