

Processing information

Re-drying: 300 – 350 °C/2 h

Welding positions:

Polarity:

Whether preheating is required depends on the base material. For low dilution low heat input necessary. Interpass temperature max. 200 °C. Otherwise welding without preheating

Application

Electrode for joint welding of unalloyed and low-alloyed steel with each other and among each other and with high-alloyed chromium, chromium-nickel, and chromium-nickel-molybdenum steel and cast steel, for austenite-ferrite joints at working temperatures of up to 300 °C. This stainless steel electrode is also suitable for welding of buffering layers and intermediate layers for chemically stable claddings. The weld metal is already corrosion-resistant on the first layer and furthermore, it is especially crack-resistant, also regarding steel which is difficult to weld. At working temperatures of more than 500 °C there is the danger of embrittlement.

Field

Characteristic

**rutile-coated,
core wire-alloyed**

Standards

**ISO 3581-A
E 23 12 2 L R 32
AWS A 5.4
E 309 MoL-16**

Material no.

1.4459

Approvals

All Weld Metal Mechanical Properties

Heat Treatment AW

Structure Austenite with approx. 15% Ferrite

Weld Metal Composition [%]

C	Si	Mn	Cr	Ni	Mo
0,02	0,9	0,7	23	13	2,6

Yield Strength Rp 0,2 [MPa] > 450

Tensile Strength Rm [MPa] > 600

Elongation A5 [%] > 30

Charpy Impact Value ISO-V [J/RT] > 50

Welding Current, Packaging
