Sales start of Q – industry 4.0-capable Kjellberg system News plasma cutting systems successful in

The German producer of plasma cutting systems Kjellberg Finsterwalde will celebrate its anniversary „60 years of plasma cutting technologies“ in autumn 2019. For this occasion the new benchmark in plasma Q 3000 ready for industry 4.0 will be launched, as Mr. Thomas Kagemann, managing director of Kjellberg sales revealed during an interview at the Hannover tradeshow this year. Orders for Q 3000 already welcome!

THIS new generation of plasma cutting units promises optimised processes for producing companies. This is made possible, among other things, by faster cutting cycles, extended lifetime of consumables and certain eServices like remote maintenance and automatic software updates. Due to the modular design the Q plus is very flexible for upgrade of power classes. One particular highlight is the integrated Silent Cut technology, thus reducing the noise of the plasma cutting process. The Q went through intensive industrial testing. First results have already been greeted with enthusiasm by Kjellberg partners as some posts i.e. on LinkedIn indicate.

**Kjellberg Solutions for Separating, Joining and Altering
A Company with a long Tradition in Metalworking**

Kjellberg offers a wide range of solutions for the metalworking industry. With the vision to increase the productivity for users, Kjellberg Finsterwalde has continuously expanded its portfolio since the foundation in 1922. Today, the company offers solutions for welding, plasma and laser cutting, wear protection as well as for the manufacture of customised special machines and tools for metalworking.

Bound by a Seal of Quality: Premium in Every Segment

It is our ambition to produce premium quality „made in Germany“ at all levels. In order to maintain this standard we have established a quality management system according to ISO 9001. It is checked and certified according to DNVGL, one of the biggest international classification societies worldwide. The quality of our products is geared to the expectations of our customers and starts already with the selection of suppliers and raw materials. At every stage of production, up to the dispatch to our customers, tests and the survey of samples are carried out.
